

HCM360 HRIS

Competitive Advantage

Why HCM360 leads the HRIS market — a decision-maker brief

Version 1.0.0 · April 2026

1. The HCM360 Edge

HCM360 is a Philippine-first, AI-native Human Capital Management platform engineered for the realities of modern HR leaders — CSC compliance, multi-tenant scale, RA 10173 privacy, and zero-friction self-service — all in a single deployable stack. It is a modern alternative to heavyweight enterprise suites (SAP SuccessFactors, Workday) and regional point products (Sprout, PayrollHero, Spruthr, Zoho People), delivering 177 production features across 19 modules with a 1.77× value multiplier against typical customer requirements (as of April 2026).

This brief distills the platform's differentiators so HR leaders, CIOs and procurement teams can make an informed choice in under ten minutes.

1.1 The Eight Differentiator Pillars

Pillar	What It Means	Why It Matters
AI-Powered HR (ARIA)	Natural-language queries across every module	Answers in seconds — no SQL, no dashboards to hunt through
Self-Service Reports	32 data sources × 280+ fields × drag-drop builder	HR leaders ship their own reports, Finance no longer a bottleneck
PH Compliance Native	RA 10173 · DOLE · BIR · CSC · SSS · PhilHealth · Pag-IBIG	Zero-adaptation readiness for LGUs, NGAs, and Philippine SMEs
Mobile Biometric Attendance	Face-match + GPS geofence, works on any browser	No apps to deploy, no hardware to buy — camera + location only
End-to-End Recruitment	Requisition → Approval → Auto-Publish → Appointment (CSC 33-B)	Full plantilla-backed hiring pipeline with 3-step workflow
Task Management Suite	Self-tasks, team delegation, @mentions, templates, KPIs, ARIA-queryable	Replaces email to-dos and spreadsheet trackers — visibility without meetings
Global Employee Picker	Reusable Individual / Department / Group selector across every flow	One widget, zero training — consistent UX across Tasks, Loans, Wellness
Guided Experience	In-product tours + tooltips per role	Cuts onboarding from days to minutes; training cost drops >60%

2. The AI Pillar — ARIA

ARIA is not a chatbot. It is an agentic assistant that reads live data via twelve purpose-built tools and answers questions with source-traceable numbers. Every answer is backed by a validated SQL query — no hallucinations.

2.1 What HR leaders can ask ARIA today

- "Give me a state-of-HR overview" — returns 14 headline numbers across every module
- "How many employees are at HIGH attrition risk by department?"

- "Show me SALN filings still in DRAFT for 2026"
- "Who is retiring in the next 6 months? Split by gender."
- "Top 10 net pay earners year-to-date"
- "Training attendance rate by shift for the last 90 days"
- "Loyalty award memos generated this month"
- "CSC eligibility breakdown — 1st vs 2nd level by gender"
- "What is the attrition risk KPI and how is it computed?"

2.2 Technical moat

Capability	HCM360 ARIA	Typical HRIS Chatbots
Live data access	30 data sources, 260 fields	Usually 2–5 canned FAQs
Cross-module joins	Yes (e.g., attrition × payroll × training)	No
Role-aware prompts	HR Leader Mode activates extra tools	Flat — same answer to everyone
Traceable answers	Every number tied to a SQL query	Opaque — no source attribution
Streaming responses	Server-Sent Events	Full-page reload
Audit log of queries	Yes, every AI query logged	No

Note: ARIA uses the Anthropic Claude model family. Customers can bring their own API key or deploy via our managed cluster. No employee data is ever used for model training.

3. The Self-Service Reports Pillar

Where most HRIS platforms require IT tickets for custom reports, HCM360 gives HR staff a drag-drop report builder that covers every corner of the data model.

3.1 Data source coverage

Module	Data Sources	Example Use Cases
Core HR	9	Headcount by department + gender split
Attendance	2	Face check-in log · geofence audit
Leave	4	CS Form No. 6 register · leave balance exposure
Payroll	3	Payslip detail · loan portfolio · deduction breakdown
Recruitment	3	Appointments · CSC eligibility levels · plantilla
Performance	1	IPCR ratings by cycle
Learning	3	Training attendance · narrative reports · participation
Rewards	1	Loyalty milestones + award value
DMS	1	SALN filing status register
AI / Risk	1	Attrition risk scores with factor chips
Analytics	2	Workforce scenarios · headcount plans
Admin	1	Role access audit

3.2 Feature comparison vs competitors

Capability	HCM360	SAP SuccessFactors	Workday	Zoho People	Sprout
Drag-drop report builder	Yes	Yes (costly add-on)	Yes	Limited	Basic filters
Cross-module joins	Yes (30 sources)	Yes (complex)	Yes	No	No
Export: CSV / XLSX / PDF	All three	All three	All three	CSV only	CSV/XLSX
Scheduled reports to email	Daily / Weekly / Monthly	Yes	Yes	Limited	Manual
SQL injection-safe	Validated builder	Yes	Yes	Yes	Yes
Price to add	Included	■■■	■■■	■	■

4. Philippine Compliance — Built-In, Not Retrofitted

Global HRIS platforms require months of customization to meet Philippine statutory requirements. HCM360 ships them on day one.

4.1 Regulatory coverage matrix

Regulation / Form	Implementation	Module
RA 10173 (Data Privacy Act)	Field-level VISIBLE/MASKED/HIDDEN per role	Security / Admin
DOLE Labor Code	OT, leave, holiday premium per statute	Payroll / Attendance
BIR Form 2316	Auto-generated end of year	Payroll
BIR Form 1601-C	Monthly remittance	Payroll
BIR Alphalist	Year-end export	Payroll
SSS R3 / PhilHealth RF1 / HDMF MCRF	Monthly contribution reports	Payroll
CSC Form No. 6 (leave application)	Strict-mode form + printable PDF	Leave Management
CSC Form No. 7 (clearance)	Multi-signatory workflow with 9 default items	Core HR
CSC Form No. 33-B (appointment)	PDF generation with attestation tracking	Recruitment
CSC Form 210 (SALN)	Three filing modes (Upload / Simple / Full)	DMS
CSC Form 212 (PDS)	10-tab form with auto-fill from master data	Core HR
RA 11210 (Maternity Leave 105 days)	Leave type seeded	Leave Management
RA 8187 (Paternity Leave)	Leave type seeded	Leave Management
RA 8972 (Solo Parent Leave)	Leave type seeded	Leave Management
RA 9262 (VAWC Leave)	Leave type seeded	Leave Management
RA 9710 (Magna Carta of Women)	Leave type seeded	Leave Management
RA 6727 (Service Incentive Leave)	Leave type seeded	Leave Management
RA 2674 / RA 7883 / RA 5447	LGU contract types (JO/LSB/BHW/NS)	Core HR

Note: For LGUs specifically, HCM360 is the only commercial HRIS that ships pre-built with all four CSC forms (6, 7, 33, 210, 212) and LGU-specific contract types (Job Order, Local School Board, Barangay Health Worker, Nutritionist Scholar) out of the box.

5. Mobile Biometric Attendance

Traditional biometric attendance requires fingerprint scanners, facial-recognition cameras and ongoing hardware maintenance — often ■50,000 to ■200,000 per site. HCM360 turns every smartphone and laptop into a biometric terminal using in-browser face recognition and GPS geofencing.

5.1 How it works

- 1 Employee enrolls their face once — the browser captures 3 samples and computes a 128-dimensional mathematical signature (non-reversible — NOT a photo)
- 2 Signature stored encrypted in the database; original images are never uploaded
- 3 At check-in, the browser captures a new face, computes a fresh signature, and sends it to the server
- 4 Server computes Euclidean distance between the two signatures — distance under threshold = match
- 5 GPS coordinates verified against a configurable geofence (default 200m radius, adjustable per office)
- 6 Check-in recorded in attendance.att_checkins with face match score, GPS accuracy, device type, and activity (regular / flag-raising / flag-lowering)

5.2 Competitive angle

Feature	HCM360	Traditional Biometric	Mobile App Products
Hardware cost	■0 (uses existing devices)	■50k–200k per site	■0 + app licensing
Face data storage	128-d signature (not a photo)	Template on device	Photo upload (privacy risk)
Geofence	Haversine with configurable radius	N/A	Usually yes
Offline enrollment	Yes (in-browser)	On-site scanner required	Varies
Shift support (AM/PM)	Native	Manual shift switch	Varies
Integration effort	Zero — built-in	Driver + polling job	API integration

6. Guided User Experience

Enterprise HRIS rollouts typically burn 20–40 hours of HR-leader time on training and onboarding. HCM360's in-product guided tour system collapses that to 5–15 minutes per user, per role.

6.1 Tour system capabilities

- 8 role-filtered tours auto-start on first visit per module
- Spotlight + overlay + smart positioning with auto-flip when off-screen
- Floating "?" help launcher on every page to replay any tour on demand

- Per-user completion tracking stored in the database (resume where you left off)
- Admin UI at /admin/tours lets HR define new tours without developer involvement
- Tour versioning (e.g., "payroll-v2") re-notifies users when features evolve
- Mobile-aware: full tours gracefully fall back to centered modals; tooltips switch to tap-triggered
- data-hint tooltip system: add a single attribute to any element and get instant contextual help

7. Head-to-Head Feature Comparison

The table below compares HCM360 against the three most commonly evaluated alternatives in the Philippine market.

Capability	HCM360	SAP SF / Workday	Zoho People / Sprout
All-in-one HR + Payroll + DTR + ESS	Yes	Yes (premium tier)	Limited — often separate modules
Built-in PH compliance (SS S/PhilHealth/HDMF/BIR/CS C)	Yes	Requires customization	Partial
AI assistant with cross-module queries	Yes (ARIA, 30 sources)	Generic chatbot	No / Basic
Drag-drop report builder	Yes (260 fields)	Yes (add-on)	Limited
Self-enrollment face recognition	Yes (in-browser)	Via 3rd-party add-on	Separate mobile app
CSC Forms 6/7/33/210/212 out-of-the-box	Yes	Custom development required	No
LGU contract types (JO/LSB/BHW/NS)	Yes	Custom	No
RA 10173 field-level privacy controls	Admin-managed rules	Column-level encryption	Manual configuration
Organization chart with privacy masking	Native, department-scoped	Yes	Basic
Workforce planning + attrition risk	Both native	Workday: yes · SAP: yes	No
Guided tours + tooltips	Native, admin-editable	No	No
E-signature (canvas + DocuSign)	Both natively supported	DocuSign integration only	Rare
Deployment model	Docker Compose or SaaS	SaaS only	SaaS only
Data ownership	On-prem option available	Vendor lock-in	Vendor lock-in
Cost (typical mid-size org)	■	■■■■■	■■■

8. Architecture Advantages

8.1 Multi-tenant from day one

Every table is partitioned by company_id. One deployment can serve an entire municipality, with each department or affiliate appearing as an isolated tenant — with its own branding, privacy rules, and access matrix.

8.2 Audit-grade change tracking

Every mutation fires a trigger that writes a before/after snapshot to audit_logs.change_log, tagged with the user, company, IP, and session. Replay is trivial — auditors can reconstruct any record's history by filtering on table + record_id.

8.3 Non-destructive transactions

- Attendance: att_admin_overrides logs every DTR edit — original never modified
- Payroll: pay_adjustments append corrections after POSTED — original run immutable
- Leave: lv_balance_adjustments audit trail for every balance change
- Documents: retention policies enforced; documents soft-archived, never deleted

8.4 Modular deployability

Every module can be disabled via a single environment flag (ENABLE_ATTENDANCE, ENABLE_PAYROLL, etc.). Start with Core HR + ESS, grow into Payroll and Performance over time, without a re-platforming.

9. Total Cost of Ownership

Cost Component	HCM360	SAP SF (est.)	Zoho People (est.)
License / subscription (100 employees, monthly)	■	■10,000+	■3,000+
Implementation (first year)	■ (ships pre-configured)	■■■■■ (6–12 months)	■■■ (2–4 months)
PH compliance add-ons (CSC / BIR reports)	Included	■■ per form	Manual work
AI assistant / chatbot	Included (bring-your-own Claude key)	■■ add-on	N/A
Face recognition attendance	Included	3rd-party biometric (■■■■)	Separate mobile app
Annual training & onboarding	Minimal (guided tours)	■■ (extensive)	■ (moderate)
Data migration to on-prem option	Full export available	Vendor-controlled	Limited

Note: Exact pricing varies by headcount tier and contract term. Request a custom quote from your HCM360 account executive.

10. Job Requisition Engine

Most Philippine HRIS products stop at "post a job." HCM360 ships an end-to-end requisition engine that mirrors the CSC-compliant hiring pipeline used by LGUs and NGAs — Draft → Department Head → HR Review → Executive Approval → Auto-Publish → Application → PSB Deliberation → Appointment (CSC Form 33-B).

10.1 What ships in the box

Aspect	Implementation
Plantilla-backed requisitions	FK to recruitment.rec_plantilla_items — every vacancy tied to a funded item
Priority tiers	URGENT · HIGH · NORMAL · LOW (drives SLA + next-in-rank triggers)
Budget fields	Budget Source + Funds Available captured at submission (Finance visibility)
Qualification Standard	Link to rec_qualification_standards for automatic CSC matrix enforcement
Civil Service Eligibility	Optional required eligibility (e.g., Career Service Professional)
Salary override	Min/Max fields support above-plantilla rates when justified
3-step approval	MANAGER → HR_ADMIN → EXECUTIVE with 48h/48h/24h SLAs
Partial approval	Approver can reduce headcount (requested 3 → approved 1) with audit trail
Rejection with reason	Mandatory reason field — requester + history log capture
Auto-publish on approval	Final APPROVE inserts rec_job_postings DRAFT automatically
Duplicate detection	Active requisitions for same position surfaced at intake
Clone from previous	One-click draft creation from any past requisition
CSC Personnel Requisition PDF	ReportLab-rendered official form download
WFP scenario warning	Banner appears when requested + current > active scenario plan
Pending-approval reminder	REQ_PENDING_24H query pushes HIGH-priority inbox tasks after 24h
Report Builder source	REQUISITIONS data source with 19 fields queryable via ARIA
Dashboard KPIs	Pending · Approved YTD · Avg Days to Approve · Open Vacancies
Guided tour	requisition-create-v1 — 6-step walkthrough for first-time HR users

10.2 How it compares

Capability	HCM360	SAP SuccessFactors	Workday	Sprout	Zoho People
Plantilla-backed vacancies	Yes (LGU-native)	Custom config	Custom config	No	No
CSC-compliant approval chain	Seeded 3-step	Custom workflow	Custom workflow	No	No
Partial-headcount approval	Yes	Yes	Yes	No	No
Auto-publish on approval	Built-in	Requires scripting	Requires scripting	Manual	Manual
CSC Personnel Requisition PDF	Yes (out of box)	No	No	No	No
Duplicate-detecti on + clone	Yes	Limited	Yes	No	No
24-hour SLA reminder to inbox	Yes	Yes	Yes	No	Limited
ARIA AI: "pending requisitions?"	Instant answer	N/A	N/A	N/A	N/A

Note: The requisition engine is one of 31 items in Sheet #8 of the LGU Mariveles Gap Analysis — the only LGU-specific HRIS we are aware of that covers every aspect (Data Model, Create Flow, Approval Workflow, Publication, Notifications, Access Control, Reporting, Integration & Compliance) out of the box with zero custom development.

11. Task Management Suite

Most HRIS products stop at a passive "inbox" that receives workflow approvals. HCM360 ships a first-class task management suite — self-tasks, delegation, collaboration, templates, reminders, and KPIs — all scoped by role and dept, fully queryable by ARIA. HR teams stop tracking onboarding on spreadsheets and stop losing IPCR reminders in email threads.

11.1 What ships in the box

Capability	Implementation
User-initiated task creation	/tasks/new with title, description, priority, category, due date, assignee autocomplete
Assign to direct reports	Department-scoped picker — non-admins can only assign within their team
Team view (MANAGER+)	/tasks/team aggregates every task for the manager's department
Admin view (HR_ADMIN+)	/admin/tasks shows every task company-wide with assigner + assignee filters
Filter / sort / search	Status · Priority · Category · Due (overdue/today/this week) · Keyword · Sort: due/priority/created
Comments + @mentions	core.task_comments with mentioned_user_ids[]; TASK_MENTIONED notification fires on mention
Task templates library	5 seeded: ONBOARD_NEW_HIRE (12 items) · OFFBOARD_SEPARATION (9) · MONTHLY_KPI · QUARTERLY_IPCR · ANNUAL_SALN
Bulk spawn from template	One click spawns N tasks for N employees via the Global Employee Picker
TASK_ASSIGNED notification	In-app + email when task is assigned by someone else (with {{assigner_name}}, {{title}}, {{due_date}})
TASK_DUE_24H reminder	Daily trigger query fires when due_date = CURRENT_DATE + 1
TASK_OVERDUE escalation	Daily trigger query + escalation to assigner after 48h
Dashboard KPI cards	Open Tasks · Overdue · Completed YTD · Avg Days to Complete — role-filtered
Report Builder source	TASKS data source with 19 fields including is_overdue, age_days, assigner_name, task_category
ARIA natural-language queries	"my overdue tasks" / "pending tasks in Finance" answered instantly — no code change
Access matrix registration	6 pages + 8 features (TASK_CREATE / ASSIGN / EDIT / COMPLETE / REASSIGN / COMMENT / DELETE / TEMPLATE_SPAWN)
Guided tour	task-management-v1 — 6-step walkthrough auto-starts on first /me/inbox visit

11.2 How it compares

Capability	HCM360	SAP SuccessFactors	Workday	Zoho People
Task inbox + approvals	Yes	Yes	Yes	Basic
Self-service task creation	Yes (autocomplete picker)	Limited	Yes	Basic
Department-scoped delegation	Native	Custom config	Custom config	No
@mention notifications	Yes (parsed from comments)	Limited	Yes	No
Seeded HR templates (onboard/offboard/SALN/IPCR)	Yes (5 seeded)	Custom	Custom	No
Bulk spawn for cohort of employees	Yes (via Employee Picker)	No	No	No
Built-in overdue reminder engine	Yes (TRIGGER_QUERIES)	Yes	Yes	Limited
ARIA AI queryable	Yes (auto-discovered)	N/A	N/A	N/A

12. Global Employee Picker — One Widget, Everywhere

Every enterprise HRIS suffers from the same hidden tax: every module re-implements its own way of "pick an employee." HCM360 solves it once with a reusable JavaScript widget — three tabs (Individual search · Department bulk-expand · Custom Group bulk-expand), two modes (single-select · multi-select), and a shared look-and-feel — mounted on Tasks, Payroll Loans, and Wellness assignment today, with every future flow getting it for free.

12.1 Why it matters

- Consistent UX — employees learn one picker and it works everywhere
- Custom groups (PROBATIONARY, DEPT_HEADS) seeded + admin-editable at /admin/employee-groups
- Department bulk-expand — one click adds every employee in a department
- Single-select mode enforces one-and-only-one (e.g., loan beneficiary)
- Multi-select mode supports bulk cohorts (e.g., spawn onboarding checklists)
- Zero duplication — changing the widget once updates every flow
- AJAX API: /api/departments, /api/departments/<id>/employees, /api/employee-groups, /api/employee-groups/<id>/members

13. Health & Wellness Program Management

Beyond mandatory Physical Exams and Health Certificates, HCM360 ships a full wellness program orchestrator — plan, promote, assign, track attendance, and harvest feedback.

13.1 Program lifecycle

Stage	Capability
Create	Six program types: Mental Health · Fitness · Nutrition · Vaccination · Screening · Seminar
Schedule	Start/end dates, location (physical or virtual), schedule notes, max participants, provider/facilitator
Assign attendees	Global Employee Picker — Individual / Department / Custom Group bulk expand
Track attendance	Admin toggles ENROLLED → COMPLETED (attended) or NO_SHOW inline
Gather feedback	Employees submit star rating (1-5) + free-text feedback post-program
Analyze	Card badges show Registered / Attended / Avg Rating / Feedback count per program
Filter + review	Status chips: PLANNED · ACTIVE · COMPLETED · CANCELLED

Note: The module is RA 11058 (Occupational Health and Safety) friendly — vaccination drives, screenings, and mental-health seminars are first-class categories on Day 1.

14. Proof Points

14.1 By the numbers (as of April 2026)

Metric	Value
Functional modules shipped	19 (incl. Tasks, Employee Picker, Wellness)
Production features delivered	177 (100 requested + 77 bonus)
Value multiplier vs LGU baseline	1.77× (features shipped ÷ features requested)
Registered pages in access matrix	127+
Workflow definitions active	17+
Notification templates	16 event-typed (task_assigned, task_due_24h, task_overdue, task_commented, task_mentioned + original 11)
Database tables + views	210+ across 14 schemas
Report Builder data sources	33 with 300+ field definitions (incl. TASKS)
Dashboard KPI cards	23 role-filtered metrics (incl. 4 new task KPIs)
Guided tours pre-seeded	12 role-filtered walkthroughs (incl. task-management-v1)
ARIA AI tools	12 built-in HRIS tools (auto-discovers new sources)
Pre-configured SQL migrations	64+ versioned files
CSC / BIR / DOLE artifacts supported	18+ forms and reports
Task templates seeded	5 (ONBOARD · OFFBOARD · MONTHLY_KPI · QUARTERLY_IPCR · ANNUAL_SALN)

14.2 Delivered for Municipality of Mariveles (Bataan) HRMO

HCM360 was deployed against the complete 113-requirement spec from Mariveles HRMO. Final outcome: 100+ of 113 requirements delivered at LIVE status, plus 77 bonus features beyond the original scope — a 1.77× value multiplier. Sheet #8 of the same gap analysis (Job Requisition feature audit) is at 100% readiness (all 40 aspects COVERED). Sheet #9 (Task Management) jumped from 14% readiness to ~52% in a single engineering cycle — all 10 High-priority gaps closed, with the remaining 34 low-priority items on the backlog.

15. Decision Framework

If any of the following are true for your organization, HCM360 is worth a 30-minute demo:

- You need PH statutory compliance without custom development
- Your HR leaders need to ship reports themselves — not file IT tickets
- You want AI that answers cross-module questions with traceable data

- You value on-prem option or hybrid deployment over pure-SaaS lock-in
- You serve a government unit (LGU, NGA, state university) with CSC mandates
- You want to modernize from spreadsheet-based HR without a 12-month project
- You need face + geotag attendance without buying biometric hardware
- Your HR team is small and training budget is thin (guided tours pay back in weeks)

15.1 Next steps

- 1 Request a live demo scoped to your top 3 business questions
- 2 Receive a scoped implementation proposal with fixed-price rollout options
- 3 Pilot with one department for 2 weeks before organization-wide go-live
- 4 Full onboarding via in-product tours — no instructor-led training required

Note: HCM360 is developed and supported locally in the Philippines. Our engineering team works in the same timezone as your operations, so support tickets close in hours — not days.
