

HCM360 HRIS

KPI Explanation

What every dashboard metric means and how it is computed

Version 1.0.0 · April 2026

1. Where KPIs Live

HCM360 displays KPIs in several places. Each one draws from the same underlying data so numbers are consistent across the platform. Where definitions could differ (e.g., "active" headcount), the system uses the same rule everywhere.

Location	Audience
/ (main dashboard)	All roles — role-filtered card set
/me/ (My Portal)	Employee — personal metrics
/reports/demographics	HR Admin, Executive — org-wide demographics
/reports (report builder)	HR Admin — custom saved queries
/workforce-planning/	HR Admin, Executive — scenario comparisons

2. Core HR KPIs

2.1 Total Headcount

Count of all employee records regardless of status. Includes probationary, regular, on-leave, and any non-terminated statuses.

```
SELECT COUNT(*) FROM core.employees WHERE company_id = :company
```

2.2 Active Headcount

Count of employees with status = ACTIVE only. Excludes probationary, resigned, retired, terminated.

```
SELECT COUNT(*) FROM core.employees  
WHERE company_id = :company AND status = 'ACTIVE'
```

2.3 Regularization Rate

Percentage of probationary employees regularized within the probation window.

```
regularized / (regularized + terminated_during_probation) × 100
```

2.4 Attrition Rate (rolling 12 months)

```
(employees_who_left_last_12mo / avg_headcount_last_12mo) × 100
```

3. Attendance KPIs

3.1 Present Today

```
SELECT COUNT(*) FROM attendance.att_daily  
WHERE work_date = CURRENT_DATE  
AND time_in IS NOT NULL AND NOT is_absent
```

3.2 Late Today

```
SELECT COUNT(*) FROM attendance.att_daily  
WHERE work_date = CURRENT_DATE AND is_late = TRUE
```

3.3 On Leave Today

```
SELECT COUNT(DISTINCT employee_id) FROM leave_mgmt.lv_requests  
WHERE CURRENT_DATE BETWEEN date_from AND date_to  
AND status = 'APPROVED'
```

3.4 Average Monthly Tardiness

Average late minutes per employee per month. High values indicate schedule or commute issues.

3.5 Overtime Hours (MTD)

Sum of ot_regular_hours + ot_restday_hours + ot_holiday_hours for the current month.

4. Leave KPIs

4.1 Pending Leave Requests

```
SELECT COUNT(*) FROM leave_mgmt.lv_requests WHERE status = 'PENDING'
```

4.2 Leave Utilization Rate

Total days used divided by total entitlement for the year. Typical healthy range: 70–85%.

4.3 Top Leave Types

Breakdown of approved leave days by type. Useful for identifying wellness trends (spikes in sick leave) or policy review (low SIL usage).

5. Payroll KPIs

5.1 Total Payroll Cost (MTD)

Sum of gross_pay for all posted runs in the current month.

5.2 Employer Statutory Cost

Total SSS ER + PhilHealth ER + HDMF ER contributions. Plan benchmark: typically 8–12% of gross.

5.3 Net Pay per Employee

```
SELECT AVG(net_pay) FROM payroll.pay_employee_payroll ep  
JOIN payroll.pay_runs pr ON pr.id = ep.run_id  
WHERE pr.status = 'POSTED' AND pr.run_date >= CURRENT_DATE - INTERVAL '30 days'
```

5.4 Loan Balance (outstanding)

Sum of balance on active loans. Tracked across SSS salary loan, Pag-IBIG, and company loans.

6. Recruitment KPIs

6.1 Open Requisitions

Requisitions with status OPEN or APPROVED but unfilled.

6.2 Time to Fill

Average days between requisition APPROVED date and offer ACCEPTED date.

6.3 Offer Acceptance Rate

$$\text{accepted_offers} / \text{total_offers} \times 100$$

7. Performance KPIs

7.1 Review Completion Rate

Percentage of evaluations submitted before cycle deadline. Drops indicate engagement or workload issues.

7.2 Rating Distribution

Histogram of final ratings across cycle. A healthy bell curve clusters around the middle rating with thinner tails.

8. Learning & Development KPIs

8.1 Training Hours per Employee (YTD)

Sum of training hours completed per employee year-to-date.

8.2 Certification Expiry in 90 Days

Number of employee certifications expiring in the next 90 days. Triggers renewal reminders.

9. Inbox & Workflow KPIs

9.1 Action Items (Pending)

Total inbox items with status unread + read-but-not-actioned.

9.2 Unread

Items never opened. Red badge on the bell indicates this count.

9.3 Urgent

Items flagged URGENT priority. Left-border of their card goes red.

10. Workforce Planning KPIs

10.1 Current vs. Planned Headcount

For each department, shows current active headcount next to scenario-targeted headcount for the end of horizon. Gap = target – current.

10.2 Projected Cost (scenario)

Monthly salary + benefits + training + recruitment cost projected from scenario assumptions.

10.3 Skill Gap

For each skill: $\text{future_demand} - \text{current_supply}$. Positive = need to hire/train; negative = surplus.

11. Privacy & Access KPIs

11.1 Masked Field Access Count

Number of times masked fields were fetched (for audit). Supports privacy impact assessments.

11.2 Access Matrix Changes (last 30 days)

Count of changes in `role_page_access` / `role_feature_access` from `audit_logs.change_log`. Anomalies warrant review.

12. Color Coding Conventions

Numbers across the dashboard use consistent colors so your eye can pattern-match quickly.

Color	Meaning
Green	Within target; healthy
Amber / Yellow	Approaching threshold; monitor
Red	Off target; requires action
Indigo (primary)	Neutral — informational only
Gray	No data / N/A

13. Drilling Into KPIs

Every KPI card on the main dashboard is clickable. Following a KPI opens the underlying list or report so you can see the individual records that contributed to the number. Filters at the top of the drill-in view let you slice by department, employment type, or date range.

14. Adding New KPIs

Administrators can add KPIs at Admin → Reference Data → Dashboard Metrics. Each metric has:

- code — unique identifier
- label — display name
- sql_query — the count/sum expression
- filter_url — where to drill in (e.g., `/employees?status=ACTIVE`)
- roles — array of role codes that see the metric
- icon, module, sort_order — presentation

Save the metric and it appears on the dashboard immediately for the allowed roles.
